SUMMARY

Software Engineering Intern skilled in Java, Python and cloud native backend development. Experienced in building scalable REST APIs, microservices, and production-grade features with strong foundations in OOP, DSA, debugging, and SDLC. Hands on with Docker, CI/CD, cloud platforms (AWS), and cross functional collaboration to deliver high quality software. Experienced in collaborating across engineering, product, and design teams. Strong written and verbal communication, teamwork, analytical problem solving skills.

PROJECTS

- **Secure Cloud Vault (2025):** Designed production grade authentication & storage components with clean coding standards and modular architecture, improving maintainability. Role: Full stack Developer Tools: CI/CD, Firebase, AES, Node.js, Blockchain, Security, Cloud Deployment
- **AI Krishi Sahayak (2025):** Applied problem solving to integrate multilingual support and AI driven recommendations, improving system efficiency and user experience.
- **KiranaWala – Quick Commerce App (2025):** Improved backend API performance and database queries for scalability (100+ users); reduced response time by 40% through profiling and debugging; collaborated with UI/UX and backend teammates.
- **Data Leak Checker (2024):** Developed a tool using the VirusTotal API to detect potential data leaks via suspicious IPs and URLs. Role: Backend API Integrator Tools: VirusTotal API, Python, Flask
- **Dining Philosophers Simulation (2024):** Simulated the Dining Philosophers problem with deadlock prevention and fair resource allocation. Role: Algorithm Designer Tools: C, Mutex, Threads, Semaphores
- **AccuTemp – Smart Health Tracker (2024):** Built a smart temperature tracking system for hospitals using sensor data and real-time monitoring. Implemented real-time monitoring dashboards with alerting mechanisms for reliability. Role: Backend & IoT Developer Tools: Node.js, Firebase, IoT SDK. Added basic observability logs for debugging and monitoring trends. Implemented backend logic with strong focus on debugging, reliability, and cloud integration.

SKILLS

Languages: C, Java, Python

Backend & API Development: Node.js, REST APIs, Microservices, JWT Authentication

Frontend: React.js, HTML, CSS, Tailwind CSS

Testing: Unit Testing, PyTest

Cloud / DevOps: AWS (EC2, S3, IAM), Docker, Git, GitHub, GitHub Actions (Basics), Version Control.

Databases: MongoDB (NoSQL), PostgreSQL (SQL), Supabase

Software Engineering: Software Development, OOP, Data Structures & Algorithms, Problem Solving, Debugging, SDLC, Clean Code, Code Reviews, System Design.

Tools & OS: Linux (Ubuntu), Windows, VSCode

Design & Productivity: Figma, Canva

WORK EXPERIENCE

RV University, Bengaluru

Jun 2025 - Ongoing

Cloud Developer Intern – (Cloud Research Project)

- Built a secure file storage system using Firebase, AES encryption, and JWT authentication.
- Integrated Firestore and Firebase Storage for secure, role-based file management.
- Built backend APIs and integrated secure file management features with Firebase Auth and AES encryption.
- Produced technical documentation (README).
- Firebase Auth · Firestore · Firebase Storage · AES Encryption · JWT · Git · GitHub · HTML/CSS/JS
- Participated in code reviews and followed best engineering practices to improve code quality.
- Contributed to software testing (unit tests) and software deployment workflows for backend features.

- Developed a Generative AI chatbot using LangChain and local LLMs (Flan-T5) for PDF-based Q&A.
- Created a GitHub repository and README for deployment and reproducibility.
- Implemented vector embedding (FAISS) and conversational chat interface using Streamlit.
- Deployed MVP locally and documented architecture on GitHub.
- Learned unfamiliar systems independently (FAISS, Firebase internals, AES, IoT SDKs) and integrated them into production-ready features.
- Quickly learned new engineering methods (FAISS, LangChain) and applied them to build a performant question-answering system with observability logs.

EDUCATION

RV University, Bengaluru

September 2023 – June 2027(Expected)

B.Tech – Computer Science and Engineering

Relevant Coursework: Data Structures & Algorithms, Object Oriented Programming (Java), Software Engineering, Database Management Systems, Operating Systems, Computer Networks, Web Development, Agile Methods.

LEADERSHIP & CLUBS

Design Lead – Viksha Coding Club

June 2025 - Present

Leading UI/UX and branding for internal and public-facing club activities Designed logo, event posters, and social media creatives Coordinating revamp of the official club website

Member – Google Developer Group (GDG) RVU

Oct 2024 – Present

Participated in workshops, DevFest events, and national-level competitions

Web Developer – IEEE RVU Student Chapter

April 2024 - Present

Maintained official club website using HTML, CSS, and JavaScript Resolved UI/UX bugs and contributed to foundational team activities
